

Microsoft® Navision Attain®

Benefits:

Dimensions in Microsoft Navision Attain helps you to better understand and direct where your business is going. Dimensions allow you to:

- Explore how your business operates on various levels
- Customize your tools as your business changes and grows
- Base important decisions on information you can trust
- Analyze your business data in detail

Dimensions

Data generated during the course of doing business can be difficult to comprehend. What features make a particular product successful? Where are you failing to deliver? How do actual costs compare with allocated budgets? The new dimensions feature in Attain helps you analyze your data so you can answer these questions.

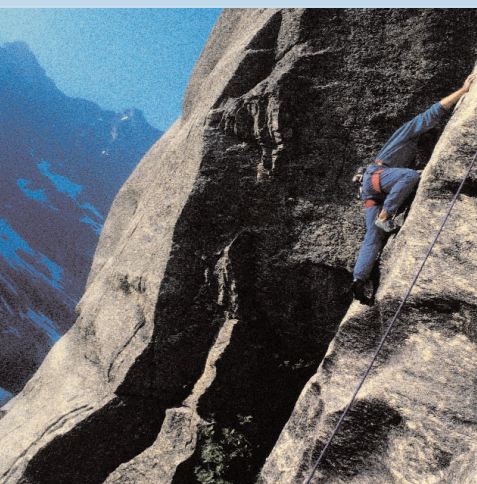

Use the built-in OLAP capabilities in Attain to analyze revenue. Compare actual to budgeted and view by day, week, quarter, month or accounting period to make strategic decisions about your business.

Dimensions allow you to attribute characteristics to the information you record and use in your daily work, giving you the power to analyze your business data in detail. By combining the analysis of different dimensions, you can get a better understanding of how well your business is operating, where it's going and where it needs help.

The dimensions you create can grow and change with your business. When new opportunities become available, there's no need to spend time changing accounting structures to fit new business processes. Instead, simply create new dimensions or modify existing ones.

Dimension rules ensure data integrity and support business rules so that your analyses are based on information you can trust. Dimensions also ensure quicker data entry with fewer errors. They help you to guarantee the consistency of both data entry and data output.

Contact your Navision Solution Center to learn more about Microsoft Navision Attain. The experts there will show you how you can improve your business processes with this remarkable software system.
