

## User Portal

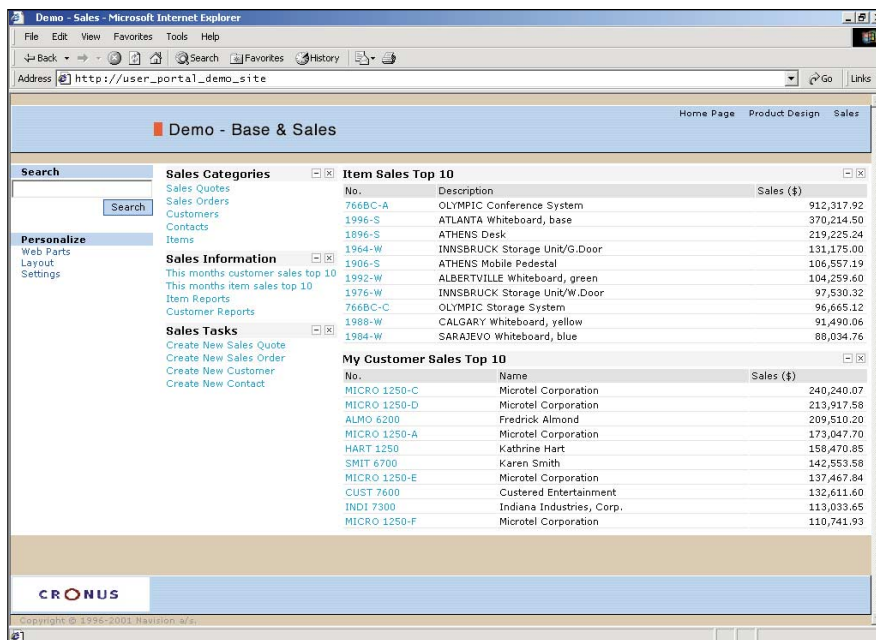

**Benefits:**

When it comes to productivity, nothing helps to limit distractions like providing focus. Navision's User Portal is a web solution that integrates your data resources into a single, browser-based interface and improves focus on priorities.

User Portal can help you:

- Deploy a role-based business solution instantly and cost-efficiently
- Help employees make better business decisions
- Increase productivity by giving employees easy access to crucial data and tools
- Improve profitability by increasing collaboration and avoiding duplication

Your employees are your greatest assets. Their productivity can make or break your business. A corporate portal, or digital dashboard, can help your employees use and share mission-critical data—enabling them to make better decisions faster. A digital dashboard is a customized solution that consolidates corporate, team, personal and external information on employee desktops and provides single point, anytime-anywhere access to analytical and collaborative tools.

*The User Portal sales role makes it easy for remotely-located sales people to access real-time Navision Attain® data using Microsoft® Internet Explorer.*

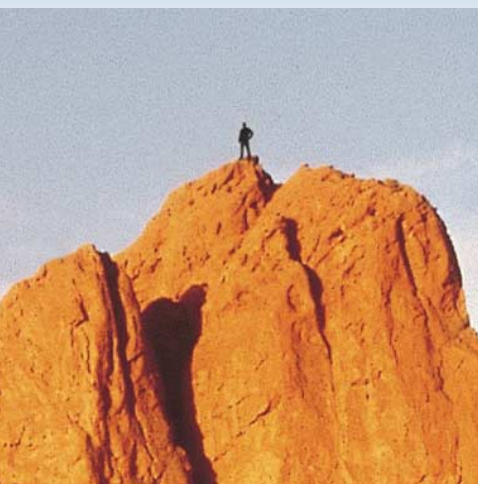

Navision's User Portal is an e-business solution that creates a corporate portal to give users access to Navision data, as well as other types of mission-critical information, through a web browser interface. Using Microsoft® Internet Explorer, User Portal consolidates information from many sources onto homepages that provide single-click access to the tools your employees need to excel at their jobs. The personalized, role-based digital dashboard helps to instantly increase employee productivity by improving focus on their priorities.

Information and services are published to the digital dashboard using Web Parts, which are reusable XML components that standardize how content is delivered to the dashboard. Employees can easily select from pre-defined Web Parts to format their own digital dashboards, and they can even create their own simple Web Parts. Customized Web Parts can be created and managed by your IT department.

User Portal requires no special training. Like all Navision products, User Portal was developed with a user focus to make it both intuitive and simple to use. Anyone who has experience working with Microsoft or Navision applications, or with the Internet, has had all of the necessary training. Not only do you save on training costs when you choose User Portal, your employees can start working with it as soon as it is deployed.

Contact your local Navision Solution Center to learn more about creating a corporate portal with User Portal. To find your local Navision Solution Center, visit us on the Internet at [www.navision-us.com](http://www.navision-us.com).
